PROFESSIONAL SUMMARY

Frontend Developer with 4 years building enterprise-scale digital banking platforms for a global Tier-1 bank at Infosys, serving retail and corporate customers internationally. Primary frontend owner of a digital banking portal module — architecture, performance, and delivery — including compliance-driven workflows (KYC, loans, account opening) and internationalized (RTL/Arabic) interfaces. Also independently designed, built, and deployed JobPilot, a live full-stack AI platform, demonstrating end-to-end ownership from database schema through production deployment. Track record of measurable gains: cut Largest Contentful Paint ~30% and redundant API calls ~40% on high-traffic dashboards.

TECHNICAL SKILLS

- Frontend: React.js, Next.js (App Router), TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS
- State & Forms: Redux Toolkit, TanStack Query (React Query), Context API, React Hook Form, Zod
- UI & Architecture: Component Architecture, Reusable Hooks, Radix UI, shadcn/ui, Design Systems, Code Splitting, Lazy Loading
- Backend & Data: Node.js, Express.js, REST APIs, Prisma, MySQL, WebSockets (Socket.io), OAuth 2.0, NextAuth
- Performance & Accessibility: Core Web Vitals, Lighthouse CI, Rendering Optimization, WCAG, ARIA, Keyboard Navigation
- Internationalization: RTL Layout, Arabic i18n, Next.js i18n Routing, CSS Logical Properties
- Testing & Tools: Jest, React Testing Library, Vitest, Git, CI/CD, Vercel

PROFESSIONAL EXPERIENCE

Frontend Developer (React.js / Next.js) — Infosys Ltd

Oct 2022 – Present

Client: Tier-1 Global Retail Bank — Enterprise Digital Banking Platform

- Primary frontend owner of the digital banking customer and admin portal module for a global Tier-1 retail bank — led architecture decisions, performance budget, and delivery, working alongside backend, QA, and design in Agile sprints.
- Reduced Largest Contentful Paint from 4.1s to 2.8s (~30%) on high-traffic dashboard pages by lazy-loading below-the-fold components with next/dynamic and tree-shaking a heavy date-formatting library, tracked via Lighthouse CI.
- Cut redundant API calls by ~40% by standardizing TanStack Query cache keys and adding a 30s staleTime, eliminating duplicate account-data fetches across dashboard components.
- Implemented RTL layouts and Arabic localization across banking modules using CSS logical properties and Next.js i18n routing, ensuring consistent experiences across Arabic and English interfaces.
- Built type-safe, compliance-focused forms with React Hook Form and Zod for KYC, loan application, and account-opening workflows, reducing production bugs from malformed input.
- Designed reusable React components and custom TypeScript hooks using Radix UI and shadcn/ui, reducing UI duplication across enterprise banking modules.
- Implemented unit/component testing with Jest and React Testing Library, improved accessibility via ARIA and keyboard navigation, and collaborated with backend, QA, and UX teams to integrate REST APIs and resolve production issues.

PROJECTS

JobPilot — AI Resume Analysis & Optimization Platform

[Live](#) · 50+ real users

Next.js 15, React, TypeScript, MySQL, Prisma, NextAuth/Better Auth, Vercel AI SDK, Zod · [jobpilot.dilshad.online](#)

- Independently built and deployed a production AI platform that evaluates resumes against job descriptions and generates structured ATS-style analysis — missing keywords, strengths, weaknesses, and recommendations.
- Implemented streaming AI responses via the Vercel AI SDK with Zod-based structured output validation and secure auth (NextAuth/Better Auth) with persistent analysis history, backed by MySQL/Prisma.

PulseBoard — Role-Based Frontend Architecture

Personal Project

Next.js, TypeScript, Prisma, NeonDB, React Query, Tailwind CSS, shadcn/ui, Chart.js · [Live](#)

- Built a role-based dashboard exploring patterns used at work but not publicly demonstrable — RBAC enforced at route, component, and action level; real-time KPIs kept correct under high-frequency updates.
- Separated server state from UI state via React Query, used schema-driven Zod validation shared across forms, and designed paginated tables/charts to handle large datasets smoothly.

EDUCATION

Bachelor of Technology (B.Tech), Computer Science

Aug 2019 – Aug 2022

Maulana Azad National Urdu University, Hyderabad, India
